## General Features

Hyperion Series Load Banks are used for performance tests of generators, UPS, voltage regulators, transformers, alternators and test laboratories and also ensure to operate the generators safely (dummy load).

Load banks are used in many industrial areas and applications. As energy needs become more and more important day by day, testing, protecting and maintaining the resources that provide this energy temporarily or continuously is becoming more and more important. Hyperion Series Load Bank provides high quality resistors, digitally adjustable load and resolution, corrosion resistant metal enclosure to operate in industrial environments.
